MEMORANDUM FOR THE RECORD

25X1A

SUBJECT: Meeting with [REDACTED] Personnel

1. Meeting held on 10 October 1963 with the following attending:

25X1A

25X1A

NPIC
NPIC
NPIC

25X1A

2. The purpose of the meeting was to discuss various problems that [REDACTED] has encountered in reducing stellar data and to recommend corrective action.

3. On Mission 9057, out of 343 exposures only 125 could be computed, and on Mission 8003 out of 1236 exposures only 701 gave satisfactory results. The reasons for failure to obtain attitude data from so many exposures are as follows:

- a. Faulty and/or misunderstood definitions, notations, and orientations used by ACIC in camera calibration reports (see attachment).
- b. According to [REDACTED] 25X1A has received faulty data from AMS due to erroneous identification and/or measurements of stars.
- c. Poor quality of the stellar images. (The instrumentation used to measure the stellar images has never operated in an automatic mode because of poor contrast and shape of the stellar images.)

4. Recommendation resulting from the meeting are as follows:

25X1A

- a. That [REDACTED] visit [REDACTED] 25X1A at ACIC to reach agreement and understanding on definitions, notations, and orientations of stellar camera calibration procedures.

SUBJECT: Meeting with [REDACTED] Personnel

25X1A

- b. That, as suggested by [REDACTED] be allowed to do all of the measurement and computations for next mission excluding AMS entirely.

25X1A c. That [REDACTED] be contacted for special processing of stellar negative.
